

Java Declare Multiple Variables

[< Previous](#)[Next >](#)

Declare Many Variables

To declare more than one variable of the **same type**, you can use a comma-separated list:

Example

Instead of writing:

```
int x = 5;  
int y = 6;  
int z = 50;  
System.out.println(x + y + z);
```

You can simply write:

```
int x = 5, y = 6, z = 50;  
System.out.println(x + y + z);
```

[Try it Yourself »](#)

One Value to Multiple Variables

You can also assign the **same value** to multiple variables in one line:

Example

```
int x, y, z;  
x = y = z = 50;  
System.out.println(x + y + z);
```

Test Yourself With Exercises

Exercise:

Fill in the missing parts to create three variables of the same type, using a comma-separated list:

```
x = 5    y = 6    z = 50;
```
