

Java super Keyword

[< Java Keywords](#)

Example

Using **super** to call the superclass of **Dog** (subclass):

```
class Animal { // Superclass (parent)
    public void animalSound() {
        System.out.println("The animal makes a sound");
    }
}

class Dog extends Animal { // Subclass (child)
    public void animalSound() {
        super.animalSound(); // Call the superclass method
        System.out.println("The dog says: bow wow");
    }
}

public class Main {
    public static void main(String args[]) {
        Animal myDog = new Dog(); // Create a Dog object
        myDog.animalSound(); // Call the method on the Dog object
    }
}
```

Definition and Usage

The **super** keyword refers to superclass (parent) objects.

It is used to call superclass methods, and to access the superclass constructor.

The most common use of the **super** keyword is to eliminate the confusion between superclasses and subclasses that have methods with the same name.

To understand the **super** keyword, you should have a basic understanding of [Inheritance](#) and [Polymorphism](#).
