

Java String Concatenation

[< Previous](#)[Next >](#)

String Concatenation

The **+** operator can be used between strings to combine them. This is called **concatenation**:

Example

```
String firstName = "John";  
String lastName = "Doe";  
System.out.println(firstName + " " + lastName);
```

[Try it Yourself »](#)

Note that we have added an empty text (" ") to create a space between firstName and lastName on print.

You can also use the **concat()** method to concatenate two strings:

Example

```
String firstName = "John ";  
String lastName = "Doe";  
System.out.println(firstName.concat(lastName));
```
