

# Java else Keyword

[< Java Keywords](#)

## Example

Use the **else** statement to specify a block of code to be executed if the condition is **false**.

```
int time = 20;
if (time < 18) {
    System.out.println("Good day.");
} else {
    System.out.println("Good evening.");
}
// Outputs "Good evening."
```

[Try it Yourself »](#)

## Definition and Usage

The **else** statement specifies a block of Java code to be executed if a condition is **false** in an **if** statement.

Java has the following conditional statements:

- Use **if** to specify a block of code to be executed, if a specified condition is true
- Use **else** to specify a block of code to be executed, if the same condition is false
- Use **else if** to specify a new condition to test, if the first condition is false
- Use **switch** to specify many alternative blocks of code to be executed

## More Examples

### Example

Use the **else if** statement to specify a new condition if the first condition is **false**.

```
int time = 22;
if (time < 10) {
    System.out.println("Good morning.");
} else if (time < 20) {
    System.out.println("Good day.");
} else {
    System.out.println("Good evening.");
}
// Outputs "Good evening."
```
