# Java do Keyword

√ Java Keywords

## Example

The following loop will always be executed at least once, even if the condition is false, because the code block is executed before the condition is tested:

```
int i = 0;
do {
    System.out.println(i);
    i++;
}
while (i < 5);</pre>
```

Try it Yourself »

## Definition and Usage

The do keyword is used together with while to create a do-while loop.

The while loop loops through a block of code as long as a specified condition is true:

9/3/22, 8:34 PM Java do Keyword

The do/while loop is a variant of the while loop. This loop will execute the code block once, before checking if the condition is true, then it will repeat the loop as long as the condition is true.

**Note:** Do not forget to increase the variable used in the condition, otherwise the loop will never end!
